DESCRIPTION

The Apollo® Model DCDA4SG, DCDA4SGN Double Check Detector Assembly is designed to prevent contamination of the potable water supply due to back-siphonage or backpressure from substances that are non-health hazards. The device consists of a mainline double check valve with a by-pass line. The by-pass consists of a water meter and an approved Apollo® double-check valve with Apollo® ball valves as shut-offs. The by-pass serves to measure water use of up to 3 gpm. Grooved connections on an epoxy-coated ductile iron body allow for easy connection to butterfly valves or gate valves. *Note: Model DCDA4SG replaces Model 4S-600 (also known as Model DCDA) in all sizes except 10".*

FEATURES

- Lightweight
- Short lay length
- Low pressure loss
- Modular check valves
- Individual access to check valves
- Corrosion resistant epoxy-coated ductile iron body
- US Patents #5,711,341 and #6,343,618
- MADE IN THE USA

FLOW CURVES

Notes:

1. Flow curves directly reflect data collected by USC's Foundation for Cross-Connection Control and Hydraulic Research Approval curve documents.
2. Flow curves shown were recorded with butterfly shut-off valves.*
3. All data points are based on USC increasing flow data, from zero GPM to rated flow (opening curve).
4. Refer to Apollo Model DCDA4S (Formerly 4S-600 Series) for 10" valve information.

* Flow curves with gate valves are slightly lower. Contact factory for more information.
